CAREER SUMMARY

AI & Machine Learning engineering graduate (CGPA 8.22/10) with hands-on experience building full-stack applications and deep learning models. Skilled in Java/Spring Boot, Python/Django, and ML/DL pipelines (TensorFlow, PyTorch, Scikit-learn). Delivered an intranet leave-management system with automated workflows and a diabetic retinopathy classifier reaching ~82% validation accuracy. Seeking an entry-level software/ML engineering role to apply these skills in a production environment.

TECHNICAL SKILLS

Languages & Web: Python, Java, HTML, CSS

Backend & Frameworks: Spring, Spring Boot, Spring MVC, Spring Security, Django

Data & ML: Machine Learning, Deep Learning, Natural Language Processing, NumPy, Pandas, Scikit-learn, TensorFlow, Matplotlib

Databases & Tools: SQL, MySQL, Data Structures, Computer Networking, Git

EDUCATION

Bachelor of Engineering, Artificial Intelligence & Machine Learning – RNS Institute of Technology (RNSIT), Bengaluru

Graduation Year: 2026 | CGPA: 8.22/10.00

Diploma (XII) – East West Institute of Polytechnic, Bengaluru

Graduation Year: 2023 | CGPA: 8.82/10.00

Secondary (Class X) – Shanti Dhama Public School, Bengaluru

Graduation Year: 2017 | Percentage: 62.88%

INTERNSHIP / PROJECT EXPERIENCE

Intern Trainee – Anudip Foundation for Social Welfare

Bengaluru | 01/2026 – 05/2026

- Completed an internship in Advanced Java Programming through hands-on, project-based learning.
- Applied Java concepts across practical projects and technical assignments, earning a 98/100 internship score.
- Demonstrated consistent collaboration, punctuality, and commitment to learning throughout the program.

Leave Scheduler System

Academic Project | Java, Spring Boot, Spring MVC, MySQL, ReactJS | 01/2026 – 04/2026

- Built an intranet leave-management system automating leave applications and approval workflows for employees and students.
- Implemented secure authentication enabling users to view eligibility, leave balance, and leave history in real time.
- Designed request workflows supporting apply, cancel, and withdraw actions, with manager-side approval and rejection.
- Automated leave crediting, email notifications, and approval alerts, reducing manual coordination overhead.
- Integrated report generation and a holiday-calendar view on a MySQL data layer with a ReactJS front end.

Early Detection of Diabetic Retinopathy using ML

Academic Project | Python, PyTorch, MobileNetV2, Gradio | 03/2025 – 09/2025

- Developed a deep learning classifier for 5-stage diabetic retinopathy detection from retinal fundus images using MobileNetV2 transfer learning.

- Fine-tuned final convolutional blocks of a pretrained ImageNet model, achieving ~82% validation accuracy.
- Applied data augmentation (crop, flip, rotation, color jitter) to improve generalization and reduce overfitting.
- Trained with Adam optimizer and StepLR scheduler; evaluated using confusion matrix, precision, recall, and F1-score.
- Built a Gradio web interface delivering real-time predictions with confidence scores and non-retinal image rejection in under 0.3 seconds per image on CPU.

POSITION OF RESPONSIBILITY

- Member, AIML Artistry Club – RNS Institute of Technology (RNSIT), Bengaluru
- Member, College CAT Club – RNS Institute of Technology (RNSIT), Bengaluru
